RESEARCH EXPERIENCE

CAPRA: Multimodal Auditing under Missing Clinical Metadata

ACM MM 2026 Oral

- Led CAPRA, a semantic-visual multimodal framework that fuses medical images with proxy-axis tokens and calibrated posteriors for missing-metadata subgroup auditing.
- Validated fundus, dermoscopy, and chest-radiography tasks under distribution shift, improving worst-group accuracy in 14 of 15 learner–dataset settings.

MedFuse: Anatomical-Prior Fusion for Retinal Lesion Segmentation

FCS 2026

- Led technical development with an ophthalmologist at Peking University First Hospital, integrating RGB fundus features with retinal vascular priors for diabetic-retinopathy lesion segmentation.
- Evaluated a hierarchical dual-encoder fusion pipeline on DDR and IDRiD across five backbones, including annotation-free priors from a multimodal large language model.
